

Super**FOIL SFBA**

Garage Door Insulation

Available at
eBay, Amazon, BHFUnlimited.com
and other top retailers!

Kit Contents:

1 x 0.6m x 10m (6sqm)
of SFBA

1 x roll of 25mm double
sided adhesive tape

1 x roll of 100mm wide
SuperFOIL Reflective tape

Installation guide:

1. First ensure the inside of the garage door is clean so there is no dust, dirt, grease or oil.
2. Stick the double sided tape to the door. Ensure you place it on the parts where you want the foil to be fixed, be sure to do the complete perimeter and fix multiple lines to ensure cover of the full width of the door and ensure each length of foil has 2 or more lines of adhesion.
3. Cut lengths of the reflective bubble foil to size, and fix them to the tape horizontally or vertically, one length at a time. Overlap the edge of each length by 50mm over the last one. Don't forget to allow a flap opening for the handle.
4. Cut the last strip to the appropriate length and width and fix to the double-sided adhesive tape as before, again overlap approximately 50mm.
5. A blanket effect will provide the best performance, so using the aluminium adhesive tape provided, seal over the overlapped joints to stop air movement.

Recommend fitting is with an ambient temperature of 5°C or higher.
